OBJECTIVE: An information technology position where I can work with hardware, software, and programming to solve problems and improve business processes. I particularly enjoy database work.

WORK EXPERIENCE: Information Analyst, March 2008 to present
Naval Hospital Pensacola, Pensacola, Florida

As an Information Analyst at NHP I've supported and enhanced applications and databases developed by my predecessor. I've created new databases, applications, and business processes. I pioneered the use of Data Access Pages and Data View Web Parts to replace existing report workbooks. I've been on the bleeding edge of SharePoint, SQL Server Reporting Services, InfoPath, Acrobat, and workflow projects.

Application Developer/IT Consultant, 1982 to present
Information & Graphics Management, Inc.

Using the business name **Information & Graphics Management, Inc.**, I've designed and built custom software applications for various clients since 1982. I've helped select, install, and configure computers, peripherals, network hardware, and software. I've trained my clients' employees to use software and hardware effectively. I've designed and built websites. I've overseen projects that make my clients' employees more efficient and have helped streamline business processes.

General Manager, December 1985 to December 2000
DMP Associates, Inc., Naples, Florida

After moving to Florida in 1985 I went to work for DMP Associates, a restaurant management company. As a General Manager I supervised all computer-related projects for the company. I supported Point-Of-Sale systems, accounting, and financial software. My schedule and working arrangement with DMP Associates was flexible enough to accommodate outside projects I undertook as **Information & Graphics Management, Inc.**

EDUCATION: Drake University, Des Moines, Iowa
B.A., Political Science, *Magna Cum Laude*, 1978
